

# HURRICLEAN

**The #1 solution**  
for dry air cleaning  
without pellet-spills

# Environmentally responsible

**HurriClean Pellet Blow-off** is a stand alone system.

Non-insulated profiled steel roof and wall cladding.

Cleaning the **HurriClean** system is easy due to its special pellet collection gutter.

Sustainable due to setting optimisation. For example, run-time sensors.

Powerful and maintenance friendly blower installation

**HurriClean** is a plug and play solution. The system can be installed around 8 weeks after order placement.

We have a collective responsibility for our environment and must ensure that we treat it with the greatest care. Producers, and the petrochemicals sector in particular, are bearing an increasing share of this responsibility. Transporting granules involves a serious risk of spillage, and silo transportation of polymers is under particularly intense scrutiny.

Silo trucks and bulk container carriers leaving petrochemical sites can spill pellets during the journey, with environmental pollution as a highly likely consequence.

In cooperation with the Petrochemical Industry, we (Habenberg Industrial Construction BV) have devised a solution to prevent plastic pellets polluting the environment.

We have designed and implemented an industry-specific dry air clean sweep installation that prevents all pollution: **HurriClean Pellet Blow-off**.

Fully compatible with well-known programs like Operation Clean Sweep®. We deliver a plug and play solution that we can implement in around 8 weeks after order placement.

You can visit our installations on request.
